

EMMANUEL SEUN SHITTU

Backend Engineer

shem4soul@gmail.com | 08055992911, 08131483479 | Lagos, Nigeria (Remote-ready) [linkedin.com/in/emmanuel-shittu-91573915a](https://www.linkedin.com/in/emmanuel-shittu-91573915a) | github.com/shem4soul

SUMMARY

Backend Engineer with production experience designing and scaling secure, high-throughput systems for payments, fintech, and multi-tenant SaaS platforms using TypeScript, Node.js, Express, and NestJS. Proven track record integrating payment rails (Paystack, Monnify, crypto gateways) with webhook-driven transaction processing, building RBAC-secured APIs, and running Redis-backed asynchronous workflows at scale. Linux Foundation KCNA (Kubernetes and Cloud Native Associate) certified, with ongoing AWS Cloud training, bringing cloud-native infrastructure expertise in containerized deployment, distributed systems, and ledger/reconciliation patterns for financial platforms.

PROFESSIONAL EXPERIENCE

Backend Developer, Divnerix Innovations

01/2025 – Present

Remote, Nigeria

- Own backend systems for live payment, donation, and event platforms built on TypeScript, Node.js, and Express.js
- Designed and secured REST APIs handling real transactions across Paystack and crypto payment gateways, including webhook-based confirmation processing
- Implemented JWT/RBAC authentication and authorization across multi-tenant, organization-based systems
- Built event-driven asynchronous workflows using Redis queues for reliable background processing at scale
- Improved API performance by up to 40% through caching, query optimization, and efficient data modeling under high-traffic conditions
- Set up CI/CD pipelines and managed deployments on AWS infrastructure

Key Contributions:

- Multi-payment donation platform with webhook processing across multiple gateways
- Event and content management system with role-based access control
- Multi-tenant architecture for scalable, organization-based systems

Backend Lead (Volunteer), ScholarGuide (EdTech Startup)

02/2025 – 10/2025

Remote, Nigeria

- Led backend architecture and API structure for a multi-role EdTech platform (students, parents, teachers, admins) built with TypeScript
- Built a gamification engine (points, badges, leaderboard) and multi-role JWT/RBAC authentication
- Designed backend systems across PostgreSQL, MongoDB, and MySQL with Redis caching for performance
- Built a high-performance search and recommendation system, improving query performance by up to 75%
- Designed scalable, role-based data models and improved database efficiency through indexing and query tuning
- Implemented caching, rate limiting, and secure API practices; documented APIs with Swagger for team collaboration

Full Stack Developer, In-Box Elite Nig. Ltd (Merchandising Company)

02/2023 – 12/2024

Benin City, Nigeria

- Built backend services for product, order, and inventory management using TypeScript, Node.js, Express, and MySQL
- Designed RESTful APIs for business operations; automated internal workflows, improving efficiency by 40%
- Improved API performance by 30% and delivered full-stack integration for operational business systems
- Introduced an automated low-stock alerting system that flagged inventory thresholds in real time, reducing stockout incidents and manual stock checks
- Designed a custom order-tracking dashboard giving the sales team real-time visibility into order status, cutting customer inquiry response time

- Proposed and implemented a caching layer for frequently accessed product data, reducing average API response times

Full Stack Developer (Bootcamp Trainee), Edo Job

03/2022 – 06/2022

Benin City, Nigeria

- Completed intensive full-stack training covering React, TypeScript, Node.js, Express, and MongoDB through project-based coursework
- Practiced Git/GitHub workflows, pair programming, and code review etiquette in a team training environment
- Built foundational REST API exercises and CRUD applications under mentor guidance
- Studied database design principles, relational modeling, and basic authentication patterns

Full Stack Developer (Intern), Edo Job

07/2022 – 12/2022

Benin City, Nigeria

- Built and shipped 7+ full-stack applications end-to-end using React, TypeScript, Node.js, Express, and MongoDB, from requirements through deployment
- Developed and maintained REST APIs for live client-facing features, working directly with product requirements
- Collaborated with the engineering team in Agile sprints, participating in sprint planning, standups, and code reviews
- Deployed applications to cloud hosting platforms and managed environment configuration for production releases
- Fixed bugs and handled feature requests raised by project leads, iterating quickly on feedback

SKILLS

Backend & Architecture	TypeScript, Node.js, Express.js, NestJS, REST APIs, Microservices, Event-Driven Systems
Payments & Integrations	Paystack, Crypto Gateways, Monnify, Webhook Processing, Idempotent API Design
Databases & Caching	PostgreSQL, MongoDB, MySQL, Redis (caching & queues), Query Optimization
Cloud & DevOps	Docker, Kubernetes (KCNA-certified fundamentals), GitHub Actions (CI/CD), AWS (EC2, S3 — Cloud certification in progress), GCP (Cloud Run, Pub/Sub — growing), Linux
Security	JWT, RBAC, OAuth2, Rate Limiting, Secure API Design
Frontend & Mobile	TypeScript, React.js, Next.js, React Native (1+ yr), JavaScript (ES6+), HTML5, CSS3, Tailwind CSS
Testing & Tools	Jest, Supertest, Swagger (OpenAPI), Postman, Agile/Scrum

OPEN SOURCE & CONTRIBUTION PROJECTS

Content Automation & Analytics Platform (Groovinx / SkyeStudio) — TypeScript, Node.js, FFMPEG — github.com/shem4soul

- Contributed backend systems for content automation and analytics, including video processing pipelines using FFMPEG
- Designed APIs for content scheduling and automation workflows; optimized backend performance for reduced latency
- Built an automated multi-format video transcoding pipeline, cutting manual processing time significantly
- Designed a rule-based scheduling engine supporting recurring and conditional content publishing
- Contributed reusable automation modules back to the shared codebase for reuse across other content projects

FINTECH & PAYMENTS-FOCUSED PROJECTS

Payroll System (Monnify Integration) — TypeScript, Node.js, PostgreSQL, Redis — github.com/shem4soul/Monnify-PayrollSystem

- Built payroll processing system with background job queues (Bull + Redis) and webhook-based transaction processing

- Integrated the Monnify API for bulk payments and reconciliation; designed secure RBAC-based financial APIs

Payment Parser & Executor API — TypeScript, Node.js — github.com/shem4soul/payment-parser-executor-API

- Built a payment parsing and execution backend for structured payment intents with modular, extensible architecture
- Designed APIs to process, validate, and execute payment-related workflows with secure transaction handling

Banking API (Wallets & Virtual Cards) — TypeScript, Node.js, Express, MongoDB, Cloudinary — github.com/shem4soul/Ecommerce-API-real-project

- Built product, order, and user management APIs with authentication, image uploads, and email notifications

Other Backend Projects

- School Management System API — RESTful backend with JWT/RBAC for students, teachers, exams, and academic records
- Social Network Blog Backend — Posts, comments, likes, and role-based user management on MongoDB
- E-commerce Backend API (SQL Version) — Relational schema and Sequelize ORM for products, users, and orders
- Jobster API — Job listing and application tracking backend with authentication and filtering

EDUCATION

Bachelor of Science, Banking and Finance — University of Benin

10/2018

Benin City, Edo State, Nigeria

National Diploma, Business Administration — Abraham Adesanya Polytechnic

11/2007 – 06/2010

Ijebu Igbo, Ogun State, Nigeria

CERTIFICATIONS

- Kubernetes and Cloud Native Associate (KCNA) — Linux Foundation
- AWS Certified Cloud Practitioner — In Progress (AWS Training Program)
- Backend Development (Node.js) — CareerEx
- Python and Statistics for Financial Analysis
- Foundations: Data, Data, Everywhere
