

EMMANUEL SEUN SHITTU

Software Engineer

shem4soul@gmail.com • 08055992911 • Nigeria • [linkedin.com/in/emmanuelseunshittu](https://www.linkedin.com/in/emmanuelseunshittu) • github.com/shem4soul

PROFESSIONAL SUMMARY

Software Engineer architecting and shipping scalable, production-grade applications with React, Next.js, NestJS, and Node.js across fintech, SaaS, e-commerce, and content platforms. Owns features end-to-end — from component-driven UI engineering through API design, database architecture, and deployment — with a track record of translating ambiguous requirements into performant, maintainable systems. Skilled at integrating third-party services, optimising for speed and reliability, and driving cross-functional collaboration with designers and product teams in fast-moving remote environments. Known for a disciplined Git workflow and consistently shipping high-quality work under tight deadlines.

CORE SKILLS

Frontend	React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Responsive Design, State Management
Mobile	React Native
Backend	Node.js, Express.js, NestJS, REST APIs, GraphQL, Third-Party API Integration
Databases	PostgreSQL, MySQL, MongoDB (Mongoose), Redis
Cloud & DevOps	AWS, Docker, Kubernetes, GitHub Actions (CI/CD), Render, Heroku, Netlify, Vercel
Auth & Security	JWT, OAuth2, RBAC, Secure API Design
Testing & Tools	Jest, Supertest, Swagger (OpenAPI), Postman, Git

PROFESSIONAL EXPERIENCE

Software Engineer | Divnerix Innovations

Jan 2025 – Present

Remote

- Architected dynamic, real-time React dashboards (live charts, counters, progress trackers) for a donation platform, delivering WebSocket-backed live monitoring with zero page refreshes.
- Drove UI velocity across two platforms by building an accessible, mobile-first component library in Tailwind CSS and React, standardising reusable form, card, and modal components.
- Architected scalable backend systems with Node.js, Express, Sequelize, and MongoDB; integrated third-party APIs and boosted performance by up to 40% through strategic Redis caching.
- Strengthened platform security and delivery speed by implementing JWT authentication with RBAC and automating CI/CD pipelines via GitHub Actions, deployed to AWS and Heroku.

Backend Lead (Volunteer) | ScholarGuide (EdTech SaaS Startup)

2025

Remote

- Architected a multi-tenant SaaS backend from the ground up, designing a tenant-isolated PostgreSQL data model that let institutions operate fully independently with zero data bleed across accounts.
- Built and versioned a suite of RESTful APIs powering course management, student profiles, progress tracking, and a points-based gamification engine with streak detection, badge logic, and leaderboard ranking.
- Engineered a granular, four-role RBAC system (Super Admin, Institution Admin, Instructor, Student), enforcing permission boundaries at both the route middleware and service layers for airtight access control.
- Authored comprehensive Swagger/OpenAPI documentation for 40+ endpoints, enabling the frontend team to integrate independently with zero back-and-forth on contract ambiguities.

Software Engineer | In-Box Elite (Merchandising Company)

Feb 2023 – Dec 2023

Benin City

- Engineered a React-powered product catalog with dynamic search, category filtering, and an optimistic-UI cart delivering instant add-to-cart updates with background API sync, lifting checkout conversion.
- Built an end-to-end order and inventory management system with Node.js/Express APIs, optimising API performance by 30% and automating operational workflows by 40%.
- Reduced invalid submission rates across checkout and registration flows by implementing real-time client-side form validation with instant field-level feedback.

Full-Stack Developer (Intern) | EdoJobs

Mar 2022 – Dec 2022

- Built a multi-step job application form in React with persistent state across steps via Context API, cutting form abandonment during testing.
- Developed RESTful backend services with Node.js and Express, integrating frontend applications with backend APIs to power dynamic, data-driven functionality.
- Delivered 7+ end-to-end projects across the full development lifecycle, deploying full-stack applications to Netlify and Vercel.

SELECTED PROJECTS

- CashNova: Architected a personal finance and invoice management application with wallets, income/expense tracking, financial reporting, and PDF invoice generation. (React Native, Expo, Bun, Hono, PostgreSQL, Drizzle ORM, TypeScript)
- E-Commerce Platform: Built a full-stack commerce platform with a React frontend and Node.js/Express REST APIs powering products, orders, payments, and Cloudinary-driven image uploads. (Node.js, Express, MySQL, React, Cloudinary)
- Banking API, Wallets & Virtual Cards: Engineered a secure, event-driven fintech backend for digital wallets and virtual cards, featuring ledger-style transaction history and Docker containerisation for reliable deployment. (NestJS, PostgreSQL, Docker, CQRS)
- Payment Parser & Executor API: Designed a backend service for parsing and executing payment transactions across multiple providers. (Node.js, Express, Paystack, Flutterwave, Stripe)
- Jobster: Built a job board platform with role-based React dashboards, job posting APIs, candidate tracking, and search/pagination. (Node.js, Express, MongoDB, React, JWT)
- Social Network Blog Platform: Developed post/comment/profile React interfaces with content moderation APIs and engagement tracking. (Node.js, Express, MongoDB, React, JWT)

EDUCATION

B.Sc. Banking and Finance <i>University of Benin</i>	2015 – 2018
National Diploma, Business Administration <i>Abraham Adesanya Polytechnic</i>	2007 – 2010

CERTIFICATIONS

- Kubernetes and Cloud Native Associate (KCNA) — Cloud Native Computing Foundation (CNCF)
- AWS Cloud Certification — In Progress
- Backend Development (Node.js) — CareerEx
- Python & Statistics for Financial Analysis
- Foundations: Data, Data, Everywhere — Google
